

Struggling with Arm Mobility?

New Hope and Help for Many Stroke and Brain Injury Patients with Arm Paralysis

Introducing The Tailwind Arm Trainer

Revolutionary new technology in arm therapy, the Tailwind arm trainer is designed to maximize your arm function following a neurological injury such as stroke or brain injury.

Proven Effective

Over a decade of Scientific Research

- **Tailwind** successfully helps improve arm mobility and function for people who are challenged with upper extremity paralysis
- Developed by doctors specializing in physical therapy and kinesiology
- Highly effective arm exerciser for chronic and acute stroke survivors
- Study results show efficacy in recent brain injuries out to more than 20 years post-stroke
- **Tailwind** offers results in individuals who may have reached a plateau or are no longer in therapy
- Scientifically referred to as **BATRAC**, the Tailwind uses Bilateral Arm Training with Rhythmic Auditory Cueing

Convenience

- Can be used at home or in a rehabilitation facility
- Easy to learn and set up
- Benefits seen from 30 minutes of use, 3 times per week
- Professional fittings are not required

Independence-Focused

Tailwind empowers individuals to become more independent. Patients successfully achieve daily tasks such as

- reading the newspaper
- holding a stair railing
- playing catch
- gardening
- pushing a grocery cart

Affordability

Tailwind is the most cost effective solution in today's market, providing patients more options and choices for taking an active role in their arm recovery.

Tailwind's progressive therapy compliments existing rehab programs allowing patients to maximize their arm recovery.

Enthusiastically recommended:

“ I have more stability now. ”

“ I can give two-arm hugs. ”

“ I feel like I have my life back! ”

Tailwind transforms the lives of stroke and other brain injury survivors by improving their arm movement and allowing them to regain their independence.
